

# API routes

The API is being designed and developed, with priority on current needs. Specifications are available in [redoc](#) (which is better formatted visually) and [swagger](#) (which allows you to try the API via the interface).

Here is a list of the current routes (last update: 06.12.2022). All routes are available with POST, while some of them also have GET or batch POST alternatives ([ref](#)). The routes that are not read-only have restricted access.

Route	Read-only	Description
<a href="#">/search/lexical-unit/</a>	yes	search for lexical units based on their properties and parts
<a href="#">/retrieve/lexical-unit/</a>	yes	get a lexical unit's basic data
